Y pieces are normally obtained from local hardware stores certainly in the UK and France. Good luck, John C Turn the taps off and remove both hoses at the washer end. Inside each inlet port there is normally a little filter which should just slide out. Clean if necessary and replace each one and the hoses. If after turning the taps back on there is no improvement, the problem is symptomatic of a malfunctioning hot or cold water control valve. Sorry but it needs a service call and a check that it isnt the control PCB;0 If this has assisted you please consider a 4 thumbs up for the rating. Thanks and good luck, John C Login to post Example of a different model washer dryer free manual I can choose a programme the active light comes on but nothing happens, no water runs into the drum and the cycle does not start. Thanks and good luck, John Clf we manually drain the machine we can get onto. Sometimes the filter will not come out with the cover and you will have to persuade it to come out to play. Its surprising what people have found in theirs. It is always worthwhile checking it on a regular basis. Now whilst the filter is removed it is normally possible to see the drain motor and ensure it is not jammed by a foreign object such as a needle or a toothpick. At this point it is also possible to test if

the motor works. No clothes or water in the machine, select a spin cycle and put the power back on. You should be able to see the motor turning at some point, possibly straight away. <http://www.invest.pl/userfiles/compaq-evo-d510-cmt-motherboard-manual.xml>

Using something suitable like a glove see if it is easy to briefly slow the motor down. If it is easy then the motor is malfunctioning. If this has assisted you please consider a 4 thumbs up for the rating. Thanks and good luck! John C It tripped the electric switch and now it will not work. The machine switches on but it keeps on flashing on the ready light. Says in manual that the door is not. Since the code is for the door, it makes sense that the washer will not work. Try adjusting the lock switch. It may be bad but sometimes you can adjust it and mess with it. Hopefully, the washer will then work. If not, you are going to need a new one. I still don't know why they have these. They cause more problems than they are worth. If you have a questions, feel free to ask and thanks for using FixYa. You will need to purchase a Y piece which is used upside down the single end is screwed onto the water supply tap and each of the hot and cold water feeds to the machine screw onto each of the double lower arms. Y pieces are normally obtained from local hardware stores certainly in the UK and France. Good luck, John C The drum no longer spins round. The belt is still attached and seems to be ok. Any ideas where to look next Thanks How old is this machine and have you ever had it serviced There is no apparent filter trap to empty, help! Clean as required. Note that depending on the machine type you may get a lot of water coming out of the filter when you remove it if the machine has not drained successfully. Note that if the machine has stopped and not fully drained then you may be able to drain out the excess water by removing or disconnecting the waste hose and laying it on the ground in a tray.

It may take a few minutes to empty but it will save a small flood. 4. Proceed by checking the drain hose for proper connection and kinks and make sure that it is not blocked. 5. Also check that the main waste drain pipe, if you use one, is not blocked and clean if required. 6. Reconnect the power and switch the machine on. If the problem persists then do the following. 7. Switch off the machine and disconnect the mains power. 8. Check the electrical connections at the pump and make sure it is operational. 9. Remove the connecting hoses, and expect water to drain out and make sure the pipes are not blocked with debris or any object blockage. 10. Makes sure the pump appears clear and that the impeller looks in good condition. 11. Reconnect the hoses and then reconnect power and switch the machine on. 12. If problem has not been corrected, then remove the pump and check that the drive coupling to the motor is OK and that the motor turns OK. If all is well then replace the pump. Is SOAKING AGENT same as detergent. So do you put some detergent in that receptacle, and some more detergent in the left receptacle. I have a Bosch Axxis ELF 2050. I just put the detergent in the left receptacle, with a warm water setting. Not even lightest stain is removed. Am I supposed to add A SOAKING AGENT too. And what on earth is that. I miss my Maytag! Simple and great! Replaced the drain pump. Pump still doesn't come on. Works fine until its time to drain in the rinse cycle. Answer questions, earn points and help others. Followed manual Followed manual instructions and drained manually via pipe and cleaned pump and pump housing, only a little sludge, but end light still keeps flashing when tried to wash again. Any ideas what next. Does the flexi hose attached to pump need taking off next Pse advise. Thanks. Turn the taps off and remove both hoses at the washer end. John C They can work intermittently sometimes, due to wear on the pump impellor. Have checked all hoses and the house drain pipe Access is via a small door at floor level. Carefully unscrew the plug inside and clean the filter. Also make sure the impeller isn't jammed with a coin. You may be able to drain with a small tube which some machines have. There is no apparent filter trap to empty, help! Clean as required. I cleaned the gray drain hose out with the garden hose and was amazed at the sludge that came out.

When the machine would run on the drain cycle we would also get a sewage smell that I thought was coming from the drain trap but turned out to be caused by the sludge in the pump. Not draining, drained manually little thin pipe at the bottom then unscrewed larger screwcap pipe and a wire from a bra came out, plus HALF of another one. When I try to either. Last time I had this happen, I had to take the machine apart, then the outlet pump and manually remove the clothing item. Most likely a service call for you. Have followed instructions in manual for unblocking drain pipe, hose and suds pump although problem doesn't drain. Take the filter out from front bottom. I recently moved into a new house which came with a set of white good, including a Bosch Precision WFG 2020 washing machine. Unfortunately, it seems that the machine will only wash at 30 degrees. Torrent Jurassic Park 4 there. Also, the house was probate so i cannot ask anyone if it worked before. Any help or ideas would be great before I get annoyed and buy a new one. Thanks JDV domestics for the answer.Ken MavorOctober 2008its very likely that the motor brushes are worn out. You can get them from bosch directly but they may be more expensive. Its a very fiddly but with a bit of patience its not that difficult. The brushes are located in the motor on both sides you release the

tabs then pull the brushes out but make sure when you put the new ones back in you put them in the right way around or the motor will make a funny noise when it turns. Take the motor out completely as it makes the job easier. You can get them from bosch directly but they may be more expensive. Its a very fiddly but with a bit of patience its not that difficult.
