Download this, a 4.3 MB PDF file, print it off, slip it into some plastic page sheet protectors and a three ring binder, and you will have the ultimate shop manual right in reach when you just need to know. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with Bridgeport Milling Machine Parts Manual. To get started finding Bridgeport Milling Machine Parts Manual, you are right to find our website which has a comprehensive collection of manuals listed. Our library is the biggest of these that have literally hundreds of thousands of different products represented. I get my most wanted eBook Many thanks If there is a survey it only takes 5 minutes, try any survey which works for you. The typeface of the manual is printed two points larger than normal for those of us who prefer to work at the bench without the use of our reading glasses. The instructions are simple and easy to follow. Though the Bridgeport is an industrial machine, it is well suited for the home garage shop or small business and the task of finding one, getting it home and getting it back into operating condition is not as expensive and daunting as you may think. Let us show you how.

Customize your Bridgeport Milling Machine with optional accessories only through Worldwide Machine Tool. Best Price Guarantee. The Bridgeport Knee Mill Series I is the most popular vertical milling machine ever made with over 370,000 machines built over the past 70plus years. Every Bridgeport comes with a FULL ONEYEAR PARTS WARRANTY and is Made in the U.S.A. Build your New Bridgeport Mill below Awesome!!!!!!” Lorenzo, J C Welding Works, Inc Every new Bridgeport milling machine for sale also comes with hand scraped chrome ways and gibs, oneshot Lube and is available in 230V 60Hz, 208V 60Hz or 460V 60Hz electrics. Worldwide Machine Tool will provide you with a complete Bridgeport milling machine price quote that includes optional accessories and a freight quote for your new Bridgeport knee mill. The Bridgeport knee mill is built to last which is why the resale value a used Bridgeport mill for sale is consistently high. The Bridgeport milling machine rigidity starts with the main frame components of a machine, and for this reason, the strength and damping qualities of gray cast iron is used. The unique design first draws cool air into the belt housing and past the spindle bearings by the rotation of the drive belt where hot air is exhausted out of the head at the top of the casting. The Bridgeport mill heads unique design increases belt and bearing life, as well as consistent accuracy.

Fans also frequently require a stepdown transformer if the Bridgeport milling machine is wired for power greater than 110 Volts. It also reduces maintenance and makes the machine more sensitive and easier for the operator to use. Operation of the system by a single lever saves the operator time and makes it easy to always provide the correct amount of oil, predetermined by a series of metering valves built into the system. Thus one sliding member may receive more oil than another; possibly causing excessive wear to the area that is not getting properly lubricated. This ensures optimum machine geometry, rigidity and accuracy. Request a quote for current pricing and availability. You can have Worldwide Machine Tool install your Bridgeport mill optional accessories or save on installation cost and do it yourself. Please have your shipping address ready so we can provide you a freight quote with your order. The parts diagrams and instructions help you setup and maintain a new Bridgeport mill. Call Worldwide Machine Tool at 6142559000 for help. Our warehouse and office is located just minutes north of Columbus, Ohio. With over 25 years of experience in the industrial machine tool industry, we have the knowledge and expertise to provide our customers with the best customer service support and technical expertise on all new and used machine tools to meet their needs. We take pride in being a trustworthy partner that our customers rely on through the years. Our experienced sales team would love to help you with your next machine tool purchase. Give us a call today or fill out the Request A Quote form on the right side of this page. Bridgeport Series I milling machines. In no event will Hardinge Inc. It was first manufactured in 1938, by two immigrant Swedish engineers Magnus Wahlstrom, a toolmaker, and Rudolf F. Bannow died 1962 a pattern maker and radio ham. By 1929 they were in business together and attempting to develop an electrically powered hedge clipper; however, when this idea was abandoned they began work on a vertical milling attachment designed to fasten to almost any of the hundreds of thousands of plain horizontal millers then in use. With this much more useful specification business began to pick up and, by 1938, with sales of 500 units per annum, and seeking further expansion, the partners decided to incorporate the head in a completely new design of highly versatile milling machine that they would produce themselves the Bridgeport. Apocryphal, no doubt but with the ring of truth the initial sketches were said to have been drawn by Rudy Bannow on a paper bag whilst waiting to unload patterns at a customer's works. Today it can be found at the Precision Museum in Windsor, Vermont, U.S.A. Because the Bridgeport was extremely well thought out its versatility was quickly appreciated in both toolrooms and production plants; not only did the whole upper turret pivot on the main column, but the round horizontal ram driven by a rack and pinion on some but not all versions could be moved forwards and backwards over a distance of 12 inches; once that setting had been achieved the whole assembly could then, if needed, be swung left and right and the head tilted over under the control of a large worm and wheel gear the latter arrangement ensuring alterations could be made quickly and with great precision. The value of this latter feature can only be truly appreciated if you have ever have struggled to hold 75 lbs of cast iron in one hand over at an angle in perfect alignment with an engraved mark whilst simultaneously trying to tighten a miserably small nut buried in some dark and oily recess hidden away at the back of the machine.

Probably due to difficulties with rigidity, not all models had a clevis on the vertical head end of the ram, later types being fitted with a more robust flat surface but retaining a clevis at the other end to mount a slotting attachment. As an interesting aside some early round ram machines have been found with a Type C head having a much improved quill travel of 5 inches, rather than the usual 3.5. Continued below A further advantage of the side drive motor was that the quill was left clear for a draw bar to pass through and retain cutters or their holders some millers of this type, while having the same quill feed arrangements, employed a motor fastened to and so blanking off the top of the spindle housing so forcing the employment of awkward to use screwed retaining rings on their noses a further consequence often being the need to use expensive custom or at least nonstandard or modified cutter holders. Details of the various milling, drilling and boring heads can be found here. On March 18th, 1954 the 20,000th machine left the Bridgeport factory a building newly erected two years earlier bound for the Pioneer Electric Research Corporation of Forest Park, Illinois. Despite one machine being produced every 45 minutes, such was the demand for machine tools in the early 1950s that a sixteen month backlog of orders, totalling over 3,600 machines, was not an unusual position for Bridgeport to be in. Some versions were adapted for CNC control and the very first Bridgeport CNC miller owed much to the design of the Series 1. By 1963 more than 60,000 examples had been manufactured, with plants in Bridgeport Connecticut, USA, Leicester and Bridlington in England and Singapore. It was also a widely copied machine, with dozens of companies in Taiwan and even fourteen in Spain at one time turning out examples of greatly varying quality and performance.

Today Bridgeport makes not just millers but turning and grinding machines as well, a sale being made to Rolls Royce in 2006 of a large and complex grinding machine on which to finish jetengine parts. As the years went by demand for the machine changed and costs came under increasing scrutiny; under various ownerships production was shifted around the globe and when owned for a time, by Textron, the machines for the USA market had their main castings poured in India and then shipped to England where the column, knee and table were built up. In 2002 at machine Serial Number BR247388 Hardinge took over the rights to Bridgeports kneemill designs on a 7year arrangement and then, in November 2004, acquired full rights to the Bridgeport name to join Hardingebranded highprecision lathes, Kellenberger cylindrical grinding machines, Hauser jig grinders, Tschudin highproduction cylindrical grinders, Tripet internalgrinding machines and Hardingebranded collets, chucks and indexing fixtures. The continued use of the Bridgeport name seems assured with Hardinge currently having over 800,000 square feet of manufacturing capacity in its operations in England, the United States, Switzerland, Taiwan and China. An interesting article about manufacturing the Bridgeport can be found reproduced from the American Machinist Magazine for November 2000. Incorporating an innovative turret and swiveling ram, the Series I was quickly recognized as the most versatile milling machine of its day. While customers in Europe and Asia seem to prefer the new computerized machines, Bridgeports U.S. customers primarily purchase manual machines. Prior to that, most of the machines used a Morse Visit Hartdinges website to find out more information. Today, the Series I Standard continues to fulfill the industrys need for an accurate, reliable, and versatile mill.
